

Upcoming HealthConnect Fall 2025 Updates

Key Updates

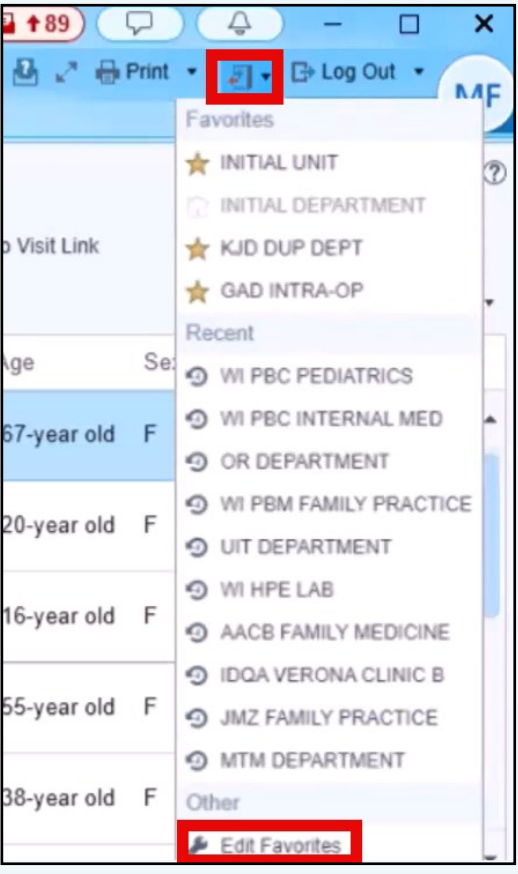

The HC Fall Update is coming Saturday, September 20, 2025. Here are some important updates:

- 1. One week prior to the update, dot phrases, dictionaries, and preference lists will be locked for any edits.
- 2. [Myhelp.kp.org](#) contains the resources for this Fall's update.
- 3. [Watch a short, 15-minute video highlighting the key changes.](#)
- 4. In general, this year's fall update is a "low impact" update and is not expected to create any significant disruptions or require significant changes in clinical workflows.
- 5. The highest-yield changes will be related to medications list and switching between departments.

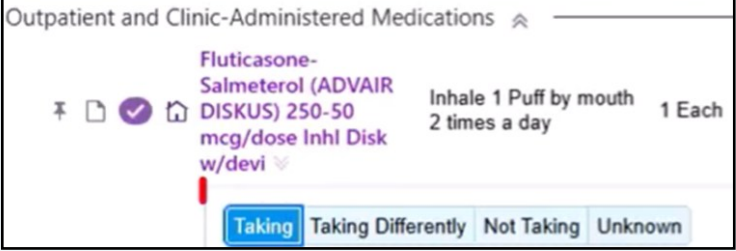

Fall 2025 HealthConnect Update Highlights

Easily Switch Departments

You can also create favorite departments by clicking on **edit favorites** and adding your usual departments. For VMC GCN, you would add UCCRCVCS VUC.

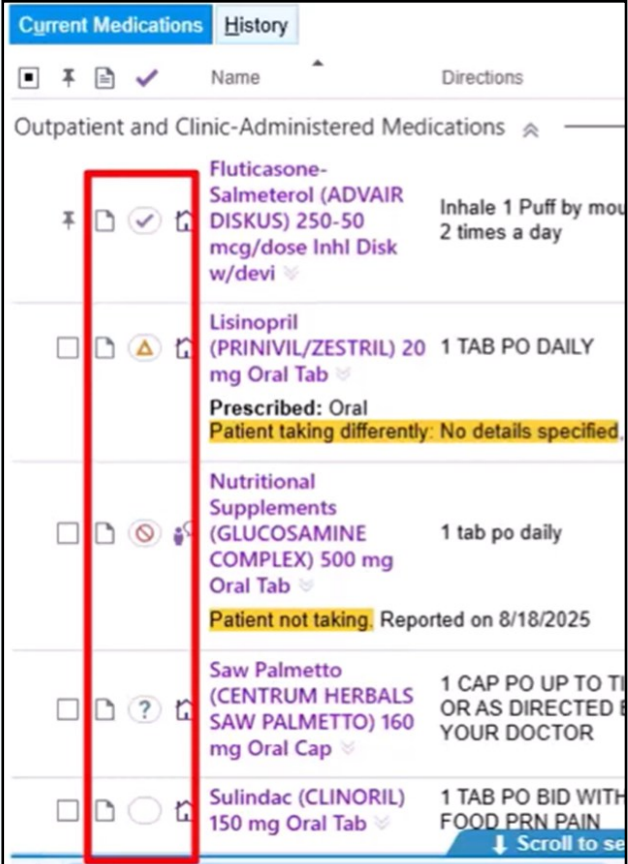

Medication Taking Status

Enhancements allow for clearer and more precise documentation of medication use.

The check mark is for taking as prescribed, the triangle is patient taking differently, the circle with a line is patient not taking, and the question mark is unknown. Blank space is no status is documented.

“Rarely Used Menu” Now the “Three Dots Menu”

Will contain items previously found in the rarely used menu. The following activities will incorporate the change:

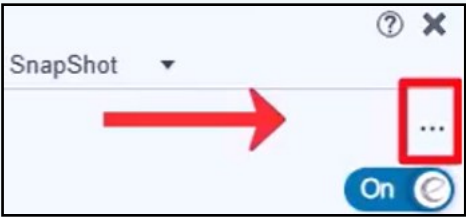

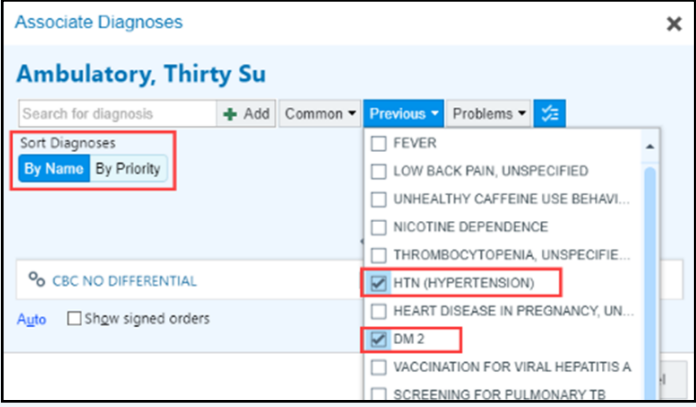

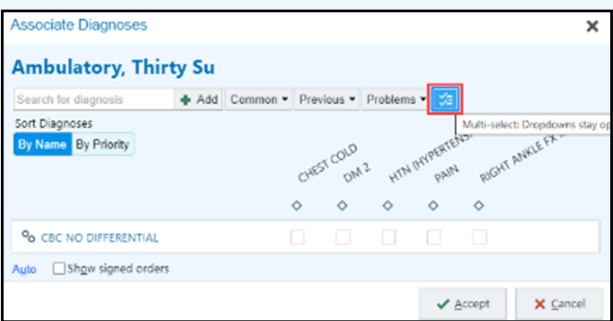

Chart Review	InBasket (Main Message Action Toolbar)	Notes
Patient Lists	Home Infusion Registration Navigator	Pedigree
Medications	Billing Information Navigator	ED Track Board
Call Navigator	DAR and Generic Appointment Scheduling Reports	Family History
Schedule	Registration	

Updated Associate Diagnoses Window

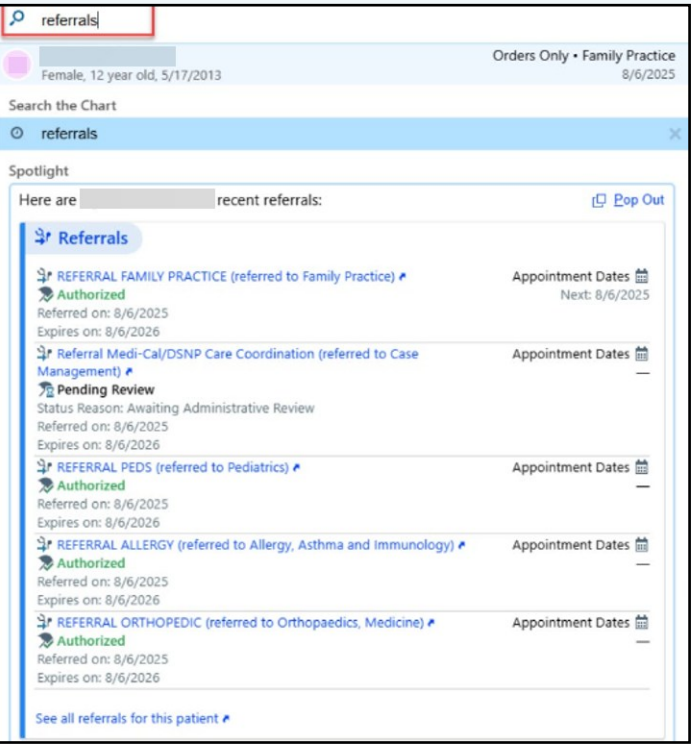

The **Associate Diagnoses** window now provides greater efficiency and flexibility. **Sort options are available:** alphabetically or by the default priority. A defaulted **multi-select toggle** allows you to select multiple diagnoses from the Common, Previous, or Problems menus. This **allows multi-selection without the list closing** each time. If you usually add only one diagnosis, you can disable the multi-select toggle.

“Best Practice Advisories” Renamed “Our Practice Advisories”

To better reflect ownership of these tools.

Spotlight Cards Using the Assistant Bar (CTRL + SPACE)

Medical history, surgical history, alcohol history, drug use history, sexual activity, recent referral (authorized, denied, or still pending), active episodes of care, and upcoming appointments.

This may help speed your chart biopsy while talking to patients.

An example of how you may use this in your clinical workflow is on the left.
