

CDC STI Guidelines: Key Updates

STI Treatment Changes: Basis for Recommendations

STI Treatment Update

Disease	Recommended Regimen	Alternative Regimen
Chlamydia in Adolescents & Adults	Doxycycline 100 mg po bid x 7 d Doxycycline is now the first line recommended treatment.	Azithromycin 1 g po x 1 dose OR Levofloxacin 500 mg po once daily x 7 d If pregnant: Azithromycin or Amoxicillin 500 mg po TID x 7 d Azithromycin if concern for nonadherence.
Uncomplicated Gonorrhea	Ceftriaxone < 150 kg: 500 mg IM x 1 ≥ 150 kg: 1000 mg IM x 1	If Cephalosporin allergy (dual regimen): - Gentamicin 240 mg IM x 1 dose AND - Azithromycin 2 g po x 1 dose If Ceftriaxone not available or feasible, but not allergy concerns: - Cefixime 800 mg orally x 1 dose

STI Testing Update

Test	Recommendation
Chlamydia & Gonorrhea	Important Adult patients - Include swabs of ALL orifices, as patients may be asymptomatic. - If appropriate, GC/Chlamydia tests of oropharynx and rectum can be done with self-collection in the lab. Pediatric patients - Urine PCR testing (lab self-collection) - All other testing outside of urine self-testing, please consider in-person evaluation.
Test of Cure	- Not required for Uncomplicated GC - Oropharyngeal GC: Recommended 14 days after initial treatment. <i>(Pharyngeal infections have lower cure rates, and asymptomatic patients can be a reservoir for ongoing transmission.)</i>
