

KP.org: Did You Know?

“Teens” (12 to 17 Years Old) Have Several Limitations on KP.org

What Features Can “Teens” Access?

- Do NOT have access to ActivityRx and letters.
 - Must perform workaround below for “teens” to receive ActivityRx/letters.
- Can schedule appointments but cannot view or cancel appointments.
- No access to after-visit summaries or notes.
- No access to view prescriptions (but can refill by Rx number).
- Parent and “teen” DO have access to **all** test results (including STI results, unless associated to “teen billing confidential”).
- DO have access to “email my doctor” (“teen” and proxy can see each other’s messages, including historical).

Note: “Teens” with “fully verified” accounts on KP.org do NOT have these limitations. To be fully verified, a physician needs to add an “FYI flag” to the teen chart. [Instructions can be found here.](#)

Workaround for “Teens” ActivityRx and Letters

How to Send an ActivityRx or Letter to a “Teen” Patient

- Create ActivityRx or letter, per routine, and sign.
- Highlight and copy the ActivityRx/letter.

- Paste the ActivityRx/letter into a secure message and send.

- Patient will receive an immediate e-mail notifying them that they received a “new message from your doctor/care team,” which will be available under **Messages** on KP.org.
- Note:** There are more advanced workarounds, but this is easiest.

Sending a KP.org E-Mail in Any HealthConnect Encounter

- You do NOT need to create a new encounter.
- Use **Search** for “send patient message” and send. (See left.)

To save “send patient message” as an Epic menu favorite:

- Go to Epic menu dropdown, which will show your most recent actions, and click on the PIN adjacent to “send patient message” to save this as a favorite. (See right.)
- You will need to customize this favorite in every HealthConnect instance.
